ARCA-SWISS QuickLink

Finally a professional solution that eliminates the tedious fixing of the tripod head.

ARCA-SWISS presents the new tripod mounting QuickLink. The combination of a mounting plate for the tripod and an insert plate which is attached to the tripod head makes attaching and detaching the tripod head child's play. The installed plates can thus be left permanently on the tripod or on the tripod head.

By means of a solid bayonet, the tripod head with its insert plate is placed into the mounting ring and securely fixed by a knurled rotating ring.

Congratulations on your purchase of the new rotaFoot for ARCA-SWISS View Cameras

The rotaFoot is a new modular accessory for ARCA-SWISS view cameras, and provides the use of digital cameras on the ARCA-SWISS rear function carrier. With rotaFoot you combine the potential of the latest digital camera technology with the outstanding design and precision advantages of the ARCA-SWISS view camera system.

Fitted with a bayonet, the rotaFoot rotating mechanism will make changes from landscape to portrait orientation simple and fast. These two positions are marked by a snap-in detent that may be overridden for a rotation that is not mechanically limited. The bellows remain attached to rotaFoot during handling and changing orientation, therefore a digital sensor will not be exposed to dust and other environmental factors.

Further information

The rotaFoot is available in different versions, depending on your photographic equipment. We will need the model of your ARCA-SWISS view camera and the digital camera you wish to mount. rotaFoot requires the use of one of our four DSLR bellows with magnetic connection.

Bellows, 10 cm, DSLR
(f= 24-120)

Bellows, 20 cm, DSLR
(f= 120-180)

Bellows, 24 cm, DSLR
(f= 150-240)

Bellows, 50 cm, DSLR
(f= 180-500)

We developed two rotaFoot

For the first version, the following bayonets are available at the moment: Fuji GFX, Sony E, Canon R, Nikon Z, L-mount (Leica, Panasonic and Sigma), Hasselblad X and Leica M. This list is not exhaustive and is only waiting to grow!

Our second version, rotaFoot GFX100, has been designed specifically for the larger FUJI GFX100 and includes a dedicated bayonet mount and front frame extender. Its shape takes into account the lower grip of the GFX100 body, which provides the shortest extensions possible to be compatible with Canon T-SE lenses.

How to change the bayonet

rotaFoot interchangeable bayonet mounts may be purchase separately for additional digital cameras and are easily installed and secured to rotaFoot with screws.

4 screws to fix the different bayonets
